SUMMARY

Frontend engineer with 4+ years of experience building Angular applications for banks in India and the Middle East. Currently the frontend owner for HDFC Bank's CBDC digital currency platform, where I lead a team of three engineers and work on micro-frontend architecture, state management and application performance. I am comfortable owning a product area end to end, from design discussions through to release, and I mentor junior developers on the team.

TECHNICAL SKILLS

Angular	Angular 14–20, Standalone Components, Signals, Zoneless & OnPush Change Detection, RxJS, Reactive Forms, Angular Router, Route Guards, Lazy Loading
Architecture & State	Micro-Frontends, Native Federation, Module Federation, NgRx, Signal-based State, Reusable Component Libraries
Languages & Styling	TypeScript, JavaScript (ES6+), HTML5, CSS3, SASS/SCSS, Responsive Design, React (working knowledge)
APIs & Security	REST API Integration, GraphQL, HttpClient, HTTP Interceptors, JWT Authentication, RBAC with Route Guards
UI & Tooling	Kendo UI, Bootstrap, FusionCharts, ngx-toastr, pdfmake (Arabic / RTL support), Vite, esbuild, Webpack, npm, Git, GitHub, GitLab
Quality & Process	Jasmine, Karma, Unit Testing, Cross-Browser Testing, Code Reviews, Agile / Scrum, Jira

PROFESSIONAL EXPERIENCE

Senior Software Developer

Jul 2022 – Present

Mindgate Solutions — Chennai, India

- Frontend owner for the CBDC project at HDFC Bank, India, leading a team of 3 engineers — wallet interfaces, transaction ledger dashboards, and real-time currency flow screens using Angular 20 and Native Federation.
- Architected a Micro-Frontend platform for GIB using Native Federation, enabling independently deployable modules and reducing time-to-release per module by 40%.
- Built and maintained enterprise Angular 20 applications with Kendo UI for FAB, GIB, Bank ABC, and Ajman Bank — Payments, Accounts, Cards, Dashboard, and Account Services modules.
- Integrated RESTful APIs and GraphQL using JWT-based authentication and HTTP interceptors; engineered high-performance data grids with RxJS and Kendo UI virtual scrolling for 10,000+ records.
- Built interactive financial dashboards and charts using FusionCharts, and implemented user notifications with ngx-toastr for transaction confirmations and multi-language alert messaging.
- Implemented client-side PDF statement and report downloads using pdfmake with custom font embedding for Arabic, delivering correct right-to-left rendering for Middle East banking clients.
- Adopted Angular Signals and standalone components across Angular 17–20 projects, applied RBAC with route guards, and improved performance ~25% via lazy loading and OnPush change detection.
- Migrated builds to the Angular Vite and esbuild application builder, cutting local development build times and improving hot-reload speed for the team.
- Ran code reviews for a 3-member development team and enforced shared coding standards, reducing defects raised during QA.
- Mentored junior developers on Angular best practices and Micro-Frontend architecture, reducing ramp-up time by ~30%.
- Built and drove adoption of a reusable, shared component library across banking projects, cutting duplicate development effort and improving UI consistency across FAB, GIB, and HDFC platforms.

PROJECTS

CBDC (Central Bank Digital Currency) Platform — HDFC Bank, India

Tech Stack: Angular 20, NgRx, Native Federation, RxJS, Signals, REST APIs, GraphQL, JWT, Kendo UI, FusionCharts, Vite / esbuild

- Frontend owner for HDFC Bank's CBDC platform — one of India's pioneering digital currency projects — covering digital wallet management, currency issuance flows, inter-bank transfer dashboards, and regulatory reporting UIs.
- Designed and implemented a Native Federation Micro-Frontend architecture on the Angular Vite and esbuild builder, enabling isolated, independently deployable currency modules with zero coupling between product teams.
- Built real-time transaction dashboards using Angular Signals and RxJS Observables, providing instant visibility into CBDC circulation metrics and ledger balances.
- Integrated REST and GraphQL APIs using JWT-based authentication and HTTP interceptors for secure wallet, ledger and currency-flow data.
- Developed reusable, configuration-driven form and table components shared across currency modules, reducing development time for new screens.

Banking Suite — FAB, GIB, Bank ABC, Ajman Bank

Tech Stack: Angular 17–20, Kendo UI, FusionCharts, RxJS, NgRx, JWT, RESTful APIs, GraphQL, Native Federation, Micro-Frontends, Vite / esbuild

- Delivered an end-to-end banking frontend suite covering Payments, Account Services, Cards Management, and Interactive Dashboards for 4 major Middle East banking clients.
- Built interactive analytics dashboards with FusionCharts and Kendo UI, presenting account balances, transaction trends and card spend summaries with drill-down and date-range filtering.
- Integrated REST and GraphQL APIs with JWT authentication and HTTP interceptors, with shared handling for errors, retries and session expiry across all banking modules.
- Built a Cards module for FAB and GIB enabling card issuance, blocking/unblocking, spend limit management, and virtual card generation with real-time API sync.
- Implemented virtual scrolling and RxJS stream optimisation to handle real-time financial datasets of 10,000+ records with sub-second rendering and zero scroll jank.
- Achieved cross-browser and cross-device compatibility across all banking modules deployed to production environments.

EDUCATION & CERTIFICATIONS

Education	Bachelor of Business Administration (BBA), Bharathiar University, Coimbatore 2017–2020
Certifications	IBM Full Stack Developer Professional Certificate (IBM / Coursera) • Python Data Structures & Web Data Access (Univ. of Michigan / Coursera) • Git & GitHub Fundamentals (Google / Coursera)

Open to Senior Software Developer and Frontend Lead roles in Banking, Fintech and Digital Payments.
